Meeting Ended: 7:49PM

1. The numbers you can use in a puzzle depend on the size of the grid. In a 4 x 4 grid, use numbers 1–4.

2. The heavily-outlined groups of squares in each grid are called “cages.” In the upper-left corner of each cage, there is a “target number” and a math operation (+, −, x, ÷).

3. Fill in each square of a cage with a number. The numbers in a cage must combine—in any order, using only that cage’s math operation—to form that cage’s target number.

4. Important: You may not repeat a number in any row or column. You can repeat a number within a cage, as long as those repeated numbers are not in the same row or column.
